# Multicollar Slim

Universal Fire Collar

**Fire resistance**  
≤ 120 minutes

**Diameter**  
Ø 315 mm

**Working life**  
30 years

**ALL IN ONE**

## Universal Fire Collar

Multicollar *Slim* is a 30 mm-high universal fire collar that consists of a stainless steel band made of 174 segments and a high-quality inlay on a graphite basis. In order to achieve the desired pipe diameter, the links can easily be separated. In the event of fire, the Multicollar *Slim* starts foaming and creates a fire-resistant seal to adjacent rooms. In combination with the Multisealant A sealant, it is also possible to achieve a smoke-proof finish. This fire collar has been extensively tested in Europe in accordance with EN 1366-3.

The Multicollar *Slim* fire collar is a single product for all applications. Thanks to the Multiclips and Multiscrews included in the box, one person can easily install it.

Multicollar *Slim* forms part of the Mulcol® Penetration Seal System.

### Types of penetrations

- ✓ Standard plastic pipes  
*PVC-U, PVC-C, PP, PE, PE-HD, ABS, SAN+PVC*
- ✓ Sound-proofing plastic pipes  
*REHAU Raupanio plus, Geberit Silent-20dB, Wavin SiTech+, Wavin AS, Blue Power, POLO-KAL 3S*
- ✓ Aluminium composite pipes such as: PE-Xb, PE-Xe, PE-RT  
*Henco, Uponor, Wavin Tigris, Geberit Mepla, REHAU Rautitan*
- ✓ Fibre composite pipes such as: PP-R, PP-B, PP-RCT  
*Aquatherm, C/imatec, Aquatechnik*
- ✓ Air-conditioning pipes such as: Wicu flex
- ✓ Copper and steel pipes
- ✓ Electric cables and cable bundles
- ✓ Cable conduits with and without electric cables
- ✓ Aluminium flue gas discharge pipes
- ✓ Concentric flue gas discharge pipes steel/PP

### Tested configurations

- ✓ Pipes in combination with steel pipe support shells
- ✓ Angled pipes (¾ principle)
- ✓ Pipes with a zero distance from walls and floors, U-shaped collar
- ✓ Pipes under a 45° angle
- ✓ Pipes tested with tuck-in, electric welding and glue sleeves
- ✓ Pipes with 87°/90° and 2x 45° corner pieces
- ✓ Multiple pipe solutions
- ✓ Pipes with or without insulation

30 mm

**MULCOL**  
INTERNATIONAL

## Technical insulation

- ✓ Thermocompact® TF, PE-foam
- ✓ ABSound Sonocool Type PM
- ✓ Jaco Massa Reinforced Alu, Jaco Massa Alu and Jaco Massa Black Alu
- ✓ Merfisol Silver ALU
- ✓ AF/Armaflex and SH/Armaflex
- ✓ Kaiflex ST and Kaiflex KKplus s2
- ✓ Insul-Phen, Insul-Pirplus and Insul-Pir 33
- ✓ Kingspan Tarecpir M1, Kingspan Tarecpir CR, Kingspan Tarecpir 82, Kingspan Tarecpir HT
- ✓ Kingspan Tarecpir HD and Kingspan Kooltherm FM

## Advantages

- ✓ Fire resistance ≤ 120 minutes
- ✓ Tested up to Ø 315 mm
- ✓ CE-certified
- ✓ Environmentally and user-friendly
- ✓ Easy to install
- ✓ One product for all applications
- ✓ One fixing medium for all structures
- ✓ Can be used anywhere thanks to its 30-mm height
- ✓ Also tested for non-standard applications
- ✓ User manual and all fasteners in one
- ✓ Damp, fungi and bacteria-resistant
- ✓ Halogen-free
- ✓ Working life of 30 years

## Applications

- ✓ Rigid floors and walls
- ✓ Flexible walls
- ✓ Shaft walls
- ✓ Firestop Boards

## Packaging

	Dimensions	Box	Outer box	Pallet	Article number
Roll (174 segments)	2610 x 30 x 12 mm	1 piece	8 pieces	384 pieces	206001174

### Accessories (included)

- ✓ 20 pieces of Multiclips, 30 mm
- ✓ 20 pieces of Multiscrews 7.5 x 40 mm
- ✓ 1 piece of Multibit T30
- ✓ 6 pieces of Conformity Statement

### Accessories (available separately)

#### Multiclip Set

20 pcs. Multiclip, 30 mm  
 20 pcs. Multiscrew 7.5 x 40 mm  
 1 pc. Multibit T30  
 Article number 802060001

#### Multiclip Set L

20 pcs. Multiclip L, 60 mm  
 20 pcs. Multiscrew 7.5 x 40 mm  
 1 pc. Multibit T30  
 Article number 802060002

#### Conformity Statement

Contents 6 pcs.  
 Article number 802060104

#### Multiscrew FB

20 pcs. Multiscrew FB,  
 40 mm for assembly on  
 firestopping boards  
 Article number 802060005

# 1. Technical Data

<b>EAN-code</b>	8719324470155
<b>Colour stainless steel belt + inlay</b>	Stainless steel + Anthracite
<b>Shelf life</b>	Not applicable
<b>Transportation - storage temperature</b>	-5 °C to +50 °C (store dry in the original packaging)
<b>Application temperature</b>	+5 °C to +50 °C
<b>Temperature resistance</b>	-20 °C to +80 °C
<b>Density</b>	$\rho = 900 \text{ kg/m}^3$ to $1350 \text{ kg/m}^3$
<b>Expansion pressure</b>	0.8 N/mm <sup>2</sup> to 1.8 N/mm <sup>2</sup> (at +300 °C)
<b>Usage category<sup>1)</sup></b>	Type Z <sub>1</sub> in accordance with EAD 350454-00-1104
<b>Reaction temperature</b>	Approx. +180 °C
<b>Expansion factor<sup>2)</sup></b>	6.5 x up to 18.5 x
<b>Mounting from one side possible</b>	Yes, please refer to ETA report 24/0330
<b>Fire class</b>	E in accordance with EN 13501-1
<b>Approvals</b>	ETA report 24/0330
<b>Function preservation</b>	30 years
<b>Joint finish</b>	Multisealant A, Multimastic SP or Multimortar
<b>Large gaps</b>	Multimastic C system (1200 x 2400 mm or $\infty$ x 1200 mm)

## <sup>1)</sup> Permissible environmental conditions

Conduit seal for use in conditions with > 85% RV, protected from temperatures below 0 °C, and without exposure to rain and/or UV (TR 024:2019, type Z<sub>1</sub>). Limited contact with splash water tolerated. Lasting wetness, stagnant water and water pressure must be avoided.

## <sup>2)</sup> Expansion factor

Tested on samples at +450 °C for 25 minutes with overload. The expansion factor is a laboratory characteristic value. The expansion factor in an installed state depends on the existing preconditions.

## 2. Assembly Instructions

### Installing the Multicollar *Slim*

The Multicollar *Slim* can be installed on different surfaces, using tested Multiclips, Multiscrews and Multiscrews FB. When installing on a stony surface, the Multiscrews must be pre-drilled.

The table below provides an overview of the fasteners to be used.

Construction	Surface	Attachment		Pre-drilled hole required
		Multiscrews 7.5 x 40 mm	Multiscrew FB40 mm	
Walls	Concrete	✓		Ø 6 mm
	Brickwork			
	Calcium silicate blocks			n/a
	Aerated concrete			
	Plasterboards			
Floors	Concrete			Ø 6 mm
	Calcium silicate blocks			n/a
Fire stopping batts	Stone wool coated batts		✓	n/a

### Reusing Segments

The remaining segments of the Multicollar *Slim* on the roll can simply be linked up using the enclosed Multiclips, thus enabling maximum use of the Multicollar *Slim*. Multicollar *Slim* is made up of a total of 174 segments that can be reused after cutting/breaking to make a new fire collar. A minimum of 2 segments is required to correctly assemble the Multiclips. A “composite” fire collar must include a maximum of 3 parts. See figure A for a principle overview.

Figure A

- a: Mulcol® Multiclip
- b: Mulcol® Multiclip (coupling clip)

### Multiclips mounting instructions

The Multicollar Slim must be installed with the corresponding Multiclips. The following principles apply to meet the tested situation:

- ✓ Divide the Multiclips as well as evenly as possible over the Multicollar Slim
- ✓ There can be a maximum of 11 segments between Multiclips “a” as shown in figure A
- ✓ Extra Multiclips can be used, as shown with Multiclip “b” in figure A
- ✓ Do not use fewer Multiclips than prescribed

## Maximum Distance between the Penetration and Multicollar *Slim*

The table below shows the maximum distance between the penetration, with or without insulation, and the Multicollar Slim fire collar. See figure B for a schematic representation.

**Figure B**

**a:** Maximum distance between the penetration and the Multicollar *Slim*

Distance between the penetration/insulation and fire collar		
∅ external [mm]	≤ 125	> 125
"a" [mm]	≤ 15	≤ 5

## Use of Single and Dual Multicollar *Slim*

The Multicollar *Slim* can be used in either single or dual applications. When using a dual application the extended Multiclips (Large) must be used. See figure C and D for a schematic representation. The table below shows how much Multiclips are required for a single and dual application.

∅ External pipes ducts, cables or insulation (mm)	Single Multicollar <i>Slim</i> Number of Mulcol® Multiclips	Dual Multicollar <i>Slim</i>	
		First Multicollar <i>Slim</i> (Number Mulcol® Multiclips, A)	Second Multicollar <i>Slim</i> (Number Mulcol® Multiclips, B)
≤ 90	2	1 <sup>(a)</sup>	2
> 90 to < 160	3	1 <sup>(a)</sup>	3
≥ 160 to ≤ 200	4	1 <sup>(a)</sup>	4
> 200 to ≤ 285	5	2	5
> 285 to ≤ 315	6	2	6

<sup>(a)</sup> Mechanical fixing on the construction is not required.

**Figure C**

**a:** Mulcol® Multiclip  
**b:** Mulcol® Multiclip Large

**Figure C**

**a:** Mulcol® Multiclip  
**b:** Mulcol® Multiclip Large

### 3. Explanation of Special Applications

#### Penetrations with Zero Distance to Construction (U-shape)

With plastic pipes with an annular space ( $\leq 30$  mm) through Flexible walls, rigid walls or floors, the Multicollar *Slim* must be extended by 15 segments; see figure 1. The starting point is diameter of the pipe, irrespective of whether it is fitted with decoupling acoustic insulation; see figure 3. With this type of penetration, the increase in the pipe diameter has been taken into account through couplers such as sliding sleeves, etc. The ends of the stainless steel belt must have a 90° bend for this solution to function correctly. The space between the Multiclips in the bend must not exceed a maximum of 15 segments; see figure 4.

#### Usage table with annular space

Ø External [mm]	Segments
40	30
50	32
56	33
63	34
70	36
75	37
80	38
90	40
100	42
110	44

Figure 1

Figure 2

Figure 3

Figure 4

## Straight Pipes with '0' distance to the floor

Pipes that are fitted over the floor with an annular space ( $S^2 \leq 5 \text{ mm}$ ) can be fitted with a  $\frac{3}{4}$  fire collar up to max.  $\text{\O} 125 \text{ mm}$ . See figures 5, 6 and 7 for the tested configurations.

Figure 5

$S^2$ : Distance to construction  $\leq 5 \text{ mm}$

Figure 6

$S^2$ : Distance to construction  $\leq 5 \text{ mm}$

Figure 7

## Inclined Pipes $\geq 45^\circ - 90^\circ$

Pipes that are fed through at an angle of  $45^\circ$  to  $90^\circ$  (see figures 8, 9 and 10) can be used in Flexible walls, rigid walls or floors. The pipes may be fitted with sound decoupling or acoustic insulation; see the table "Permitted insulation materials" on page 31 for more information.

Figure 8

Figure 9

Figure 10

## Wall and Floor Corner Solutions

Pipes that are placed along light wall partitions, rigid walls or floors with an annular space can be provided with a  $\frac{3}{4}$  fire collar, up to max.  $\varnothing$  125 mm. For the tested configurations, see figures 11, 12, 13 and 14.

**Figure 11**

**S<sup>1</sup>:** Distance to construction  $\leq 5$  mm  
**S<sup>2</sup>:** Distance to construction  $\leq 5$  mm

**Figure 12**

**Figure 13**

**S<sup>1</sup>:** Distance to construction  $\leq 5$  mm  
**S<sup>2</sup>:** Distance to construction  $\leq 5$  mm

**Figure 14**

**S<sup>1</sup>:** Distance to construction  $\leq 5$  mm  
**S<sup>2</sup>:** Distance to construction  $\leq 5$  mm

## Multiple Penetrations

With the Multicollar *Slim*, multiple pipes can be finished with fire protection, irrespective of whether it is combined with electric cables. If multiple penetrations with a so-called annular space pass through light partitions or rigid walls, a single Multicollar *Slim* fire collar can be used. See figures 15 and 16. In some cases a double Multicollar *Slim* should be used; see figure 17.

**Figure 15**

**S<sup>1</sup>:** Spacing max.  $\leq 15$  mm  
**S<sup>2</sup>:** Distance to construction  $\geq 0$  mm

**Figure 16**

**Figure 17**

## Pipe Support Penetrations

Service penetrations must be held in place  $\leq 450$  mm from the fire partition. With floors, the support must only be applied at the top of the floor at a distance of  $\leq 450$  mm.

## Joint Sealings in Rigid Walls

The minimum wall thickness is 100 mm and the wall must consist of concrete, aerated concrete or brickwork, with a minimum density of  $400 \text{ kg/m}^3$ .

Joints around service penetrations, with or without insulation, must have a fire-resistant seal to prevent the passage of smoke and hot gases. Multisealant A, Multimastic SP or Multimortar must be used, depending on the Joint width. Multisealant A and Multimastic SP fire-resistant sealants can be applied without a backing. For more information, see ETA report 24/0330.

Permissible filling materials for joints around pipe penetrations

Multimortar (EN 13501-1: fire class A1)	Multisealant A, fire stopping sealant	Multimastic SP, fire stopping mastic
Joint width: $\geq 10$ mm	Joint width: $\leq 20$ mm	
Depth: Over the full thickness of the wall	Depth: $\geq 10$ mm, on both sides of the wall	

## Joint Sealings in Flexible Walls

The minimum wall thickness must be 100 mm and the wall must consist of steel or timber studs with at least 2 layers of cladding on both sides with a minimum thickness of 12.5 mm.

When using timber studs, a minimum distance of 100 mm from each part of the conduit seal to a timber studs and the gap between the conduit seal and the studs must be capped. The cavity between the conduit seal and the studs must have at least 100 mm class A1 or A2 insulation (according to EN 13501-1).

Joints around service, with or without insulation, must have a fire-resistant seal to prevent the passage of smoke and hot gases. Multisealant A or Multimastic SP should be used for this purpose. Multisealant A and Multimastic SP fire-resistant sealants can be applied without a backing. For more information, see ETA report 24/0330.

Permissible filling materials for joints around pipe penetrations	
Multisealant A, fire stopping sealant	Multimastic SP, fire stopping mastic
Joint width: $\leq 20$ mm	
Depth: $\geq 10$ mm, on both sides of the wall	

## Joint Sealings in a Rigid Floor

The minimum floor thickness is 150 mm and the floor must consist of concrete or aerated concrete, with a minimum density of 400 kg/m<sup>3</sup>.

Joints around service penetrations, with or without insulation, must have a fire-resistant seal to prevent the passage of smoke and hot gases. Multisealant A, Multimastic SP or Multimortar must be used, depending on the Joint width. Multisealant A and Multimastic SP fire-resistant sealants can be applied without a backing. Some penetrations have been tested with a stone wool backing of 35 kg/m<sup>3</sup>. For more information, see ETA report 24/0330.

Permissible filling materials for joints around pipe penetrations		
Multimortar (EN 13501-1: fire class A1)	Multisealant A, fire stopping sealant	Multimastic SP, fire stopping mastic
Joint width: $\geq 10$ mm	Joint width: $\leq 20$ mm	
Depth: Over the full thickness of the floor	Depth: $\geq 10$ mm, on both sides of the floor. Joints with a backing only require a Joint sealant at the underside of the floor	

## Joint Sealings in Flexible Walls

Coated batts can be used in combination with flexible walls, rigid walls and rigid floors. The fire barriers must have a minimum thickness of 100 mm (2x50 mm), with a density of at least  $\geq 150 \text{ kg/m}^3$ .

Joints around service penetrations, with or without insulation, must have a fire-resistant seal to prevent the passage of smoke and hot gases. Multimastic SP fire stopping mastic should be used for this purpose. When the ducts are completely enclosed by fire-stopping stone wool, fire stopping mastic is not required. For more information, see ETA report 24/0330.

### Permissible filling materials for joints around pipe penetrations

Multimastic SP, fire stopping mastic

Joint width:  $\leq 20 \text{ mm}$

Depth:  $\geq 10 \text{ mm}$ , on both sides of the wall

## 4. Tested Configurations

### Plastic Pipes, Uninsulated

Construction	Thickness [mm]	Configuration*	Max. Ø [mm]	Insulation type
Rigid and flexible walls	$\geq 100$	Straight pipes	Ø 315	n/a
		Inclined pipes $\geq 45^\circ - 90^\circ$	Ø 125	
		Coupling elements		
		87° / 90° Elbows	Ø 110	
		Elbow 2 x 45°		
		Corner solutions		
		Support structure	Ø 90	
		Multiple penetrations	Ø 75 (3x)	
Rigid floors	$\geq 150$	Straight pipes	Ø 315	n/a
		Inclined pipes $\geq 45^\circ - 90^\circ$	Ø 125	
		Coupling elements		
		Elbow 2 x 45°	Ø 110	
		Corner solutions	Ø 110	
		Multiple penetrations	Ø 110	
Stone wool coated batts	$\geq 2 \times 50$	Straight pipes		

\*see the "Tested configurations" table on page 14 and 15

Tested configurations in rigid and flexible walls

Straight pipes	Inclined pipes $\geq 45^\circ - 90^\circ$	Coupling elements
		
87° / 90° Elbows	2 x 45° Elbows	Zero distance (U-shape)
		
Corner solutions	Support structure	Multiple penetrations
		

Tested configurations in rigid floors

Straight pipes	Inclined pipes $\geq 45^\circ - 90^\circ$	Coupling elements
		
Elbows 2 x 45°	2 x 45° Elbows	Corner solutions
		
Multiple penetrations		
		

## 5. Installation Manual Multicollar *Slim*

**1**

Make sure that the service penetration and the gap are free from dust, dirt and grease.

**6**

Cut the inlay away with the knife on both sides of the custom-size fire collar.

**2**

Openings  $\leq 20$  mm<sup>1)</sup> can be sealed with Multisealant A firestop acrylic sealant or Multimastic SP firestop mastic, over a depth of 10 mm.

**7**

If the stainless-steel joints fit well together, the inlay has been properly cut.

**3**

Measure the diameter of the service penetration. See the application table on the packaging for plastic pipes<sup>2)</sup> for the length of Multicollar *Slim* (number of segments) and the multiclips required.

Ø Pipe	Segments	Multiclip
40-50	15	2
50-60	17	2
60-70	18	2
70-80	19	2
80-90	20	2
90-100	21	2
100-110	22	2
110-120	23	2

**8**

Place the fire collar around the service penetration, attach the end of the fire collar with multiclip and secure with the screws provided.

**4**

Count the number of Multicollar *Slim* segments required on the roll and then cut through the inlay with a knife.

**9**

Distribute the remaining Multiclips proportionally and secure with screws.

**5**

Break the Multicollar *Slim* where it has been cut.

**10**

Fill in the conformity statement and paste it next to the fireproof seal.

<sup>1)</sup> Larger openings around service penetrations can be sealed according to the installation requirements for the Multimastic C System or the Multimortar System.

<sup>2)</sup> Steel pipes with insulation, depending on the fire resistance, can be provided with a single fire collar up to a total diameter of 283 mm.

For use and for more information about an application, refer to the Mulcol documentation, local and international approvals.

See the **Mulcol Fire Protection app** for the correct application in combination with fire resistance, or use our **selector** at [www.mulcol.com](http://www.mulcol.com).

## 6. Performance

## 4. Actually tested solutions

All the latest tested solutions with the Multicollar *Slim* can be found in our **Multiselector**. Scan the QR code or press the Multiselector button to get directly to the tested solution for your project.

Our **Multiselector** can also be found in our **Mulcol Fire Protection App**.  
It can be downloaded from the **App Store (iOS)** or **Google Play Store (Android)**.

## 7. Spacing

**Figure 1**

**A1:** Distance between the seal and penetration  $\leq 20$  mm  
**A2:** Spacing  $\geq 100$  mm

**Figure 2**

**A1:** Distance between the seal and penetration  $\leq 20$  mm  
**A2:** Spacing  $\geq 100$  mm

**Figure 3**

**A1:** Distance between the seal and penetration  $\geq 0$  mm  
**A2:** Spacing  $\geq 20$  mm

**Figure 4**

**A1:** Distance between the seal and penetration  $\geq 0$  mm  
**A2:** Spacing  $\geq 20$  mm

**Figure 5**

**A1:** Distance between penetration and top of the seal  $\geq 100$  mm  
**A2:** Distance between penetration and side of the seal  $\geq 100$  mm  
**A3:** Spacing  $\geq 100$  mm

**Figure 6**

**A1:** Distance between penetration and top of the seal  $\geq 100$  mm  
**A2:** Distance between penetration and side of the seal  $\geq 100$  mm  
**A3:** Spacing  $\geq 100$  mm

## 8. Pipe Insulation (Configuration)

Insulations serve different functions and can therefore be arranged around pipes in different manners. This must be taken into account when applying fire stopping seals on these pipes.

Possible configurations are shown below:

## Permitted Insulation Materials

Mulcol Multicollar *Slim* has been extensively tested with various insulating materials. The permitted insulating materials are shown in the table below. For basic details, please refer to our Multiselector and our test report: ETA 24/0330.

Insulation type	Pipe type	Permitted <sup>1)</sup>
<b>Acoustic insulation</b> <i>Fire class B-s1, d0, in accordance with EN 13501-1</i>	<ul style="list-style-type: none"> <li>✓ PE / PE-HD / ABS / SAN+PVC pipes</li> <li>✓ PP pipes</li> <li>✓ PVC pipes</li> </ul>	<ul style="list-style-type: none"> <li>✓ Absound Sonocool Type PM</li> <li>✓ Merfisol Silver Aluminium</li> <li>✓ Jaco Massa Reinforced Aluminium</li> <li>✓ Jaco Massa Black Aluminium</li> <li>✓ Jaco Massa Aluminium</li> </ul>
<b>Decoupling acoustic insulation</b> <i>Fire class E, in accordance with EN 13501-1</i>	<ul style="list-style-type: none"> <li>✓ PE / PE-HD / ABS / SAN+PVC pipes</li> <li>✓ PP pipes</li> <li>✓ PVC pipes</li> <li>✓ Fibre composite pipes</li> <li>✓ Low noise pipes</li> <li>✓ Multilayer pipes</li> </ul>	<ul style="list-style-type: none"> <li>✓ ThermaCompact TF</li> </ul>
<b>Elastomeric insulation</b> <i>Fire class BL-s3, d0 of B-s3, d0, in accordance with EN 13501-1</i>	<ul style="list-style-type: none"> <li>✓ PVC pipes</li> <li>✓ Fibre composite pipes</li> <li>✓ Multilayer pipes</li> <li>✓ Steel pipes (stainless steel)</li> <li>✓ Copper pipes</li> <li>✓ Cast iron pipes</li> </ul>	<ul style="list-style-type: none"> <li>✓ AF/Armaflex</li> <li>✓ SH/Armaflex</li> <li>✓ Kaiflex ST</li> <li>✓ Kaiflex KK plus s2</li> <li>✓ K-Flex EC</li> <li>✓ K-Flex EC AD</li> <li>✓ K-Flex EC</li> <li>✓ K-Flex ST</li> <li>✓ K-Flex ST/SK</li> <li>✓ K-Flex ST Frigo</li> <li>✓ K-Flex SRC</li> <li>✓ K-Flex SRC Eco</li> </ul>
<b>PIR/PUR insulation</b> <i>Fire class E in accordance with EN 13501-1</i>	<ul style="list-style-type: none"> <li>✓ Steel pipes (stainless steel)</li> <li>✓ Copper pipes</li> <li>✓ Cast iron pipes</li> </ul>	<ul style="list-style-type: none"> <li>✓ Insul-Phen</li> <li>✓ Insul-Pirplus</li> <li>✓ Insul-Pir 33</li> <li>✓ Kingspan Tarecpir M1</li> <li>✓ Kingspan Tarecpir CR</li> <li>✓ Kingspan Tarecpir B2</li> <li>✓ Kingspan Tarecpir HT</li> <li>✓ Kingspan Tarecpir HD</li> <li>✓ Kingspan Kooltherm FM</li> </ul>
<b>Miscellaneous thermal insulation</b> <i>Fire class CL-s1-d0, i.a.w. EN 13501-1</i>	<ul style="list-style-type: none"> <li>✓ Multilayer pipes</li> <li>✓ Air-conditioning pipes (copper)</li> </ul>	<ul style="list-style-type: none"> <li>✓ PE-Foam e.g.</li> </ul>

<sup>1)</sup>Insulation materials must have at least the same fire class as tested in accordance with EN 13501-1.

## 9. Usage tables

### Usage Table for Plastic Pipes, Uninsulated

Plastic pipe Ø Outer (mm)	Penetration without insulation segments (pc)	Multiclip (pc)	Multiclip Large (pc)	Quantity/roll
16-40	15	2		11
50	17	2		10
56	18	2		9
63	19	2		9
75	22	2		7
80	23	2		7
90	25	2		6
100	27	3		6
110	29	3		6
125	32	3		5
140	36	3		4
160	40	4		4
200	48 (x2)	1	5	3 (1.8)
250	59 (x2)	2	5	2 (1.4)
315	72 (x2)	2	6	2 (1.2)

Number of segments U-shape penetrations up to Ø 110 mm: Ø Penetration + 15 Segments

## Plastic Pipes, Insulated

Construction	Thickness [mm]	Configuration	Max. Ø [mm]	Insulation type
Rigid and flexible walls	≥ 100	Straight pipes	Ø 110	Elastomer (9 - 32 mm)
Rigid floors	≥ 150			

## Usage Table for Plastic Pipes with Insulation (Armaflex, Kaiflex, e.g.)

Plastic pipe Outer Ø (mm)	Penetration with insulation 9 mm		Penetration with insulation 13 mm		Penetration with insulation 19 mm		Penetration with insulation 32 mm	
	Outer Ø (mm)	Segments (pc)	Outer Ø (mm)	Segments (pc)	Outer Ø (mm)	Segments (pc)	Outer Ø (mm)	Segments (pc)
16	34.0	15	42.0	16	54.0	19	80.0	24

## 10. Flue Gas Pipes

Flue gas pipes can consist of single or double systems. When it involves eccentric connections, the central heating boiler has a parallel system. In this case, a separate outlet pipe is used for flue gases and a separate pipe for the air supply. A concentric connection uses a combined air supply and flue gas discharge system. This means that the flue gases are removed by an inner pipe and that the combustion air is supplied through the outer pipe.

All of the tested flue gas pipes are shown below:

Flue Gas Pipe - Aluminium up to Ø 130 mm			
Construction	Thickness [mm]	Classification [min]	Multicollar Slim
Rigid shaft wall	≥ 70	EI 90-U/C	Double
Flexible shaft wall	≥ 100		
Rigid floor	≥ 150		

Flue Gas Pipe - PP up to Ø 125 mm			
Construction	Thickness [mm]	Classification [min]	Multicollar Slim
Rigid shaft wall	≥ 70	EI 60-U/U	Double
Flexible shaft wall	≥ 100	EI 90-U/C	Single
Rigid floor	≥ 150		

Concentric - PP/PP - up to Ø 125 mm			
Construction	Thickness [mm]	Classification [min]	Multicollar Slim
Rigid shaft wall	≥ 70	EI 60-U/U	Double
Flexible shaft wall	≥ 100	EI 90-U/C	Single
Rigid floor	≥ 150		

Concentric - Steel/PP - up to Ø 200 mm			
Construction	Thickness [mm]	Classification [min]	Multicollar Slim
Rigid shaft wall	≥ 70	EI 90-U/C	Double
Flexible shaft wall	≥ 100		Single
Rigid floor	≥ 150		Double

# 11. Test Configuration

## Introduction

The test configuration determines the application of plastic pipes. Before testing a pipeline type, the intended use of the pipeline must be considered. Where will it be used in practice? Standard EN 1366-3:2009 sets requirements in this regard. The end of the pipe must be capped or uncapped, based on this. See the test configuration in table 1 and 2.

In a test, the conditions to which the pipeline and the sealing system are exposed to are determined by asking whether one or both pipe ends are capped in practice. The pressure and flowrate of hot gases will be different in a pipe that is in contact with the outside air than in a capped pipe. It is important to ensure that the sealing system is tested under appropriate conditions.

**Table 1 - Test configuration plastic pipes**

Test setup	Pipe end		Permitted use			
	In the oven	Outside the oven	U/U	C/U	U/C	C/C
U/U	Uncapped	Uncapped	✓	✓	✓	✓
C/U	Capped	Uncapped	✗	✓	✓	✓
U/C	Uncapped	Capped	✗	✗	✓	✓
C/C	Capped	Capped	✗	✗	✗	✓

**Table 2 - Test configuration metal pipes**

Test setup	Pipe end		Permitted use		
	In the oven	Outside the oven	U/C	C/U	C/C
U/C *	Uncapped	Capped	✓	✓	✓
C/U	Capped	Uncapped	✗	✓	✓
C/C	Capped	Capped	✗	✗	✓

\* U/C tested and therefore U/U is covered

## Plastic Pipes

Table H.1 shows a few examples of types of pipes and the intended use, where the end of the pipe is capped or uncapped. The table does not take all possible applications into account. The choice of whether to close the end or leave it open depends on a number of aspects: is the system under pressure and it is ventilated or unventilated? Consider the intended use of the pipe to determine whether it should be capped or left uncapped. If national regulations set different requirements than those contained in table H.1, follow the regulations.

**Table H.1 - Plastic Pipe Test Configuration per Application**

Type of pipe	Pipe end		Test setup
	In the oven	Outside the oven	
Rainwater drainage	Uncapped	Uncapped	U/U
Sewage, Ventilated	Uncapped	Uncapped	U/U
Sewage, Unventilated	Uncapped	Capped	U/C
Gas pipe, drinking water pipe, hot water pipe	Uncapped	Capped	U/C

There is no application for a plastic pipe penetration with a test classification of C/U or C/C, according to table H.1 from EN 1366-3.

## Metal Pipes

Metal pipes will normally be closed in the furnace as no open end is to be expected in the event of a fire, this due to the melting away of metal. Herewith is assumed that the suspension system remains in place. If the pipes are supported by a non fire resistant suspension system or are waste disposal shafts, the pipes are not sealed in the furnace, as shown in Table H.2.

**Table H.2 - Test Configuration Metal Pipe by Application**

Type of pipe	Construction		Test setup
	In the oven	Outside the oven	
Supported by a fire resistant <sup>a</sup> suspension	Capped	Uncapped	C/U
Supported by a non fire resistant suspension system	Uncapped	Capped	U/C
Shafts for waste disposal	Uncapped	Capped	U/C

<sup>a</sup>confirmed by testing or calculations (e.g. Eurocodes)

## 12. Building Element Properties

### Flexible walls

The minimum wall thickness must be 100 mm and the wall must consist of metal or timber studs\* with at least 2 layers of cladding on both sides with a thickness of 12.5 mm. Can also be used with fire-stopping stone wool boards, 2 x 50 mm Multimastic FB1, maximum seal size: unlimited width x 1200 mm height (uninterrupted partition styles required, with a centre distance of up to 2400 mm).

### Rigid walls

The minimum wall thickness is 100 mm and the wall must consist of concrete, aerated concrete or brickwork, with a minimum density of 400 kg/m<sup>3</sup>. Can also be used with fire-stopping stone wool, 2 x 50 mm Multimastic FB1, maximum seal size: unlimited width x 1200 mm height.

### Rigid floors

The minimum floor thickness is 150 mm and the floor must consist of concrete or aerated concrete, with a minimum density of 400 kg/m<sup>3</sup>. Can also be used with fire-stopping stone wool boards, 2 x 50 mm Multimastic FB1, maximum seal size: 2400 x 1200 mm (w x h).

*\*There must be a minimum distance of 100 mm from each part of the conduit seal to a timber stud and the gap between the conduit seal and the stud must be capped. The cavity between the conduit seal and the stud must have at least 100 mm class A1 or A2 insulation (according to EN 13501-1).*

The support structure must be classified in accordance with EN 13501-2 for the specified fire resistance.

## 13. Available Documents

### Technical documents available

- ✓ Product Data Sheet (PDS)
- ✓ Technical Data Sheet (TDS)
- ✓ Safety Data Sheet (SDS)
- ✓ Installation Manual
- ✓ CE certificate

### Approvals

- ✓ Tested in accordance with EN 1366-3
- ✓ Classification in accordance with EN 13501-2
- ✓ Certified in accordance with EAD 350454-00-1104
- ✓ ETA report 24/0330
- ✓ Declaration of Performance (DoP)

The above documents are available from your Mulcol contact or via [www.mulcol.com](http://www.mulcol.com)

For help in finding the right fire-stopping finish for penetrations, see our **Multiselector** at [www.mulcol.com](http://www.mulcol.com) or download the **Mulcol Fire Protection App** in the **App Store** (iOS) or **Google Play Store** (Android).

For the digital registration of firestopping in your buildings, you can use the **Mulcol Data Manager** free of charge. For registration on site, use our **Mulcol Fire Protection App**.
